THYROFLEX

FOR THE DIAGNOSIS AND
MANAGEMENT OF
THYROID DISORDERS

Research by the leading thyroid experts, Broda-Barnes & Hertoghe indicates that 80% of the population has a thyroid disorder. Unfortunately, a good percentage is unaware that they have the condition. For this reason, thyroid function screening is vital for everyone and as a preliminary health assessment.

The conventional screening by standard blood test is not a valid tool to establish a baseline thyroid function, it can be costly and often times misleading or inaccurate, especially with sub-clinical hypothyroidism.

THYROFLEX

The patented Thyroflex is a non-invasive state of the art system to test, diagnose and manage thyroid conditions. It uses reflexes and symptoms to accurately determine Thyroid function.

According to Sir Dr. R. I. S. Bayliss a famous Endocrinologist with the foremost Lister Hospital in London, England, Endocrinologist to the British Royal Family - *"All Thyroid blood tests are not accurate in determining the thyroid function. The only way to determine thyroid disease is from reflexes and symptoms."*

WHY THYROFLEX?

Only 18% of the thyroid hormone (T3) can be found in the blood. Chances of detecting thyroid disorders in the blood are low, as it is not comprehensive enough. Blood test measures only the TSH levels, or T3, T4, FT3, FT4, which have limited value in diagnosing thyroid conditions.

The TSH levels measured **cannot** determine the "ideal" dose of thyroid medication, so it is not surprising that most often patients still remain symptomatic. Also many individuals have "normal" TSH levels, but suffer from the classical symptoms of hypothyroidism. Most physicians require objective evidence before diagnosing hypothyroidism on the basis of a patient's clinical symptoms, when their blood tests fall within the "normal" range. So these sub-clinical hypothyroidism individuals are often denied treatment that would help them manage the condition.

Unlike the blood test, the Thyroflex tests the end artifact of the thyroid function (FT3) and has a 98% accuracy rate. The Thyroflex test measures the neurotransmitter speed (brain function), the reflex speed, and the resting metabolic rate (RMR). It also takes into account the "Core Hormones" - stress hormones (Cortisol, GABA, DHEA, D3), sleep hormones, Iodine and CoQ10.

For this reason, Thyroflex Thyroid Testing is most feasible for making a diagnosis and for determining the optimal dose of thyroid medication for symptomatic patients.

THE PROCESS

The Thyroflex tests for thyroid condition and further assist in the medical analysis of potential health conditions. The analysis and treatment is integrated through the revolutionary SAM Software for Age Management that provides health history, health forecasts, health condition management and treatment recommendation as a complete solution.

Upon completion of the Thyroflex test, it determines whether the patient is hypo, hyper, or euthyroid. The results are then uploaded into the SAM system for the next step to prescribe the treatment according to the thyroid levels. The thyroid medications needs to be "titrated" - that is, to adjust the medications slowly until the correct dosage is determined. All our prescriptions are FDA compliance.

Usually about 10% of patients tested, require extra blood tests to further assess autoimmune disease. Hashimoto's, or Graves' disease and RT3 require a very specific protocol and treatment program.

The Procedure Overview

- 1 Register patient and complete the online questionnaire
- 2 Perform Thyroflex Test (4 mins)
- 3 Upload Thyroflex Report to the SAM Software and input other biomarkers
- 4 View instant results
- 5 Review Condition Management
- 6 Review automated treatment recommendation
- 7 Print report, provide APP credentials and provide products

THE PRICING PLAN

THYROFLEX TESTING SOLUTION

- No Machine purchase, we supply complete system, training, maintenance, updates, upgrades and replacement
- Refundable deposit USD 500
- One time processing fee USD 125
- Monthly licensing and user fee

SAM SYSTEM – DIGITAL PLATFORM FOR AGE MANAGEMENT

- Monthly licensing fee USD 250

CONTACT US

For a demo session and pricing details.

WHY WORK WITH US?

- A one-stop solution for the testing, diagnosis and management of Thyroid Disorders.
- We provide the testing devices, the protocols and the medications to support your clinic.
- Advanced digital platform for Age Management and condition management solutions.
- APP available for smartphones application – Health Report.
- Real time diagnosis and automated treatment recommendation.
- Identifies patients at risk within a 15 min consultation.
- The treatment is all natural and bioidentical, and results are fast.
- The Thyroflex Test has an accuracy rate of 98%.
- It is non-invasive, pain-free and cost effective.
- It is the best treatment protocol available in the market today, where the results speak for themselves.
- Thyroflex system has enormous success internationally – used and endorsed by the top specialty centers around the world such as The Hall Center, Holtorf Medical Group...etc

MEDIA EXPOSURE

TV SHOWS

- Dr. Phil Show
- The Doctors Show
- Discovery Channel
- The Tonight Show
- Evening News New Jersey
- Xtra
- Channel 12 News New York
- Better Arizona News Show

- Own Your Journey - Lyn Hougraph
- Thyroid Healthy - Suzy Cohen

BOARDS

- The Hall Center - Venice
- Transformations - Los Angeles

MEDICAL CONFERENCES

- AMMG
- ACAM
- Metabolic Conference NZ
- Anti Aging Congress - Sao Paulo Brazil

QUOTES

“The non invasive Thyroflex™ technology test represents the best that modern medicine has to offer while at the same time bringing back the original truths of clinical practice.”

Dr Jeffery Dach M.D. (Radiologist Hollywood FL)

“I recently had a patient featured on the Discovery Channel about her obesity... in my opinion, if we had the Thyroflex™ system we would have identified the underlying cause and avoided Gastric Bypass surgery.”

Dr. Kent Holtorf M.D. (Endocrinologist Los Angeles CA)

“The Thyroflex represents a quantum leap in the care of thyroid disease. Many physicians know that thyroid blood tests and basal temperature levels are woefully inadequate in subtle thyroid disease. The Thyrodine measurement of body iodine synergizes with the Thyroflex to give us a dynamic solution in managing the widespread elusive iodine deficiency / thyroid dysfunction that harms so many of our patients.”

Dr. Murray “Buz” Susser, M.D. (H). Scottsdale, AZ.
